ESTABLISHED 1927

BUILT-UP ROOFING SYSTEM- 4 PLY

Built-Up Roofing (BUR) is one of the oldest and most common types of commercial roofing membrane that is still applied to roofs today with a track record of over 120 years. BUR is a series of field laminated layers of asphalt and Organic or Fibreglass felt, with a flood coat of asphalt and Pea Gravel used for UV protection. The most important things to consider when selecting a built-up roof are the quality of materials, professionalism and the experience of the installers – Bothwell-Accurate gives you all of these, ensuring the best capital return on investment for your roofing project

Advantages:

- Time proven
- Good adhesive characteristics
- Fairly good chemical resistance

Disadvantages:

- Brittle at low temperatures
- Messy and dangerous
- 90% field assembled
- Labor intensive
- Smell
- Escalating Crude Oil Prices

Common Facilities with Built Up Roofing:

- Schools
- Warehouses
- Malls
